

Coding scheme used to classify the *APSA* online job listings data, as discussed in Box-Steffensmeier and Sokhey's (2006) *Dynamic Labor Market* piece.

The open-ended listings in the *APSA ejobs* data file were coded using the following scheme (and then counted):

For the main job listed:

- 1=American politics
- 2=Methods (includes jobs advertised using the terms "methods," "quantitative methods," "quantitative research methods," "statistical methods," and other combinations of these terms)
- 3=Comparative politics (includes job listings asking for area specialists)
- 4=Judicial politics
- 5=Political theory
- 6=Public policy/law
- 7=Other
- 8=No useful information was provided (e.g., only the school name/department name was in the file)

For whether or not a position advertised was tenure track:

- 1=tenure track
- 0=not tenure track
- 2=unsure/cannot tell from the advertisement

For whether or not methods was requested as a subfield in an advertisement (up to three subfields could be listed for a position):

- 1=methods requested in at least one subfield
- 0=methods not requested in at least one subfield
